

Grease Management for Households

Do not pour grease down the drain.

Do dispose of grease and fat with your regular household trash. Pour grease into a heat resistant container with a heat resistant lid. Before disposing of the grease in the trash, make sure that it completely hardens.

Grease can collect in the sewer lines and cause a sewer backup. This causes every rate payer \$\$\$.

If you would like to recycle your grease and fat from your household, the following companies are grease recyclers (you may want to call before taking the used grease):

AAA.....	345-3965
American Waste Removal.....	344-0177
